With great respect,
I humbly dedicate this book to
Richard J. Lazzara, DMD, MScD, and
Keith D. Beaty, BS (Civil Engineering)

These men have demonstrated a great
ability to combine their

knowledge, experience, and ideas

to create multiple
breakthrough concepts and
instrumentation in
implant dentistry.

They brought
their visions to fruition
through
3i® Implant Innovations, Inc.

Dr. Lazzara and
Mr. Beaty have
profoundly
influenced my
career and
practice but
they have also
changed the
lives
of clinicians
and patients
around
the world.

Foreword

Dr. Carl Drago is an educator and practitioner with a vision to share his experiences with dental colleagues. His first book, *Implant Restorations: A Step-by-Step Guide for Dentists*, illustrated his approach for multiple, basic implant case reconstructions. Carl now supports your move to the next level with this book. Each clearly written chapter continues your growth in implant placement and reconstruction with insightful treatment plans, explanations, and solutions for patients requesting implant restorations. Dr. Drago describes our multidisciplinary team approach for the total care of implant patients.

Carl explains the communication between clinicians and laboratory technicians on an appointment-by-appoint-

ment basis. He discusses the restorative options, his billing program, loading protocols, implant component selection, work orders, and clinical procedures for each case type. The patient's aesthetics and functional goals are identified and their accomplishments in each case are his measure of success. This book will expand your practice and enjoyment of implant dentistry. Include it with your favorite texts that define the way you practice.
